

Troubleshooting

Troubleshooting

System to troubleshoot	Documentation or tips
Gitlab Runner	[[https://docs.innersource.soprasteria.com/runner/faq/]]
Docker	You'll find Docker configuration files here
I can't download Docker Images from Nexus	Check your Docker files here
Jenkins automatic compilations	Read the logs in the pipeline [[http://192.168.2.89:8080/job/Aero-Webb/job/v7/job/1_Projects_compilation/job/Develop/]]
Jenkins Daily environments	Read the logs in the pipeline [[http://192.168.2.89:8080/job/Aero-Webb/job/v7/job/0_daily/]]
Tomcat KO on Windows	Kill the process and start again tomcat
Tomcat KO on Linux	Identify Tomcat process with <code>ps -aux grep tomcat</code> , kill the process, restart it manually or with service
My Windows server is slow	It's Windows, that's normal, but check memory and CPU usages, if it's PostgreSQL that take all the ressource restart the service and pray Cthulhu that it was the good solution
My Linux server is slow	As "root" user, run <code>systemctl restart apache2 postgresql</code> command as it will resolve 90% of your issues, and restart tomcat manually or with its service
My Windows server doesn't have more space	Remove useless files manually
My Linux server doesn't have more space	Remove useless files manually, and don't forget to make a cron which cleans log files
I can't access Mattermost anymore	Mattermost has been closed on August 31 st
I can't get some war archive from	

Nexus

If it has been deleted, just launch the default CI-CD Pipeline from the Gitlab Project and the Branch you need (for example GUI STD Controller on 7.5.0-SNAPSHOT), it will compile the project, and if it compiles it will upload a snapshot on Nexus
